

## **PART 1 GENERAL INFORMATION-**

### **SUMMARY**

#### **THE WORLDS ONLY PERMANENTLY MATTRESS LIFT ASSISTING DEVICE**

Increasing competition in the hospitality industry is resulting in housekeeping staff now having an 85% higher risk of injury than non-housekeeping staff due to heavier, more luxurious beds. The Mattress Lift Assist is an innovative product that was designed for the reduction of injuries related to bed making. Each lift is strategically, and permanently placed in the corners of the mattress helping reduce the mattress weight by 75%. Not only will this reduce the amount of injuries related to bed making, but it also means that the hotel owners potentially expect significant reduction in workers compensation claims, resulting in increased profits and boosting employee retention.
